DETAILED ACTION

Election/Restrictions

1. Claims 1-6 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected method of making an optical fiber, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 7/31/06.
2. The traversal is on the ground(s) that chemical etching is unexplained. This is not found persuasive because one of ordinary skill in the art of optical fiber stripping would recognize that by chemically etching a surface of an optical fiber, one can strip and uncoat surfaces.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 7-10 and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by United States Patent Number 5,061,035 to Rogers, Jr (hereinafter Rogers).

As to claim 7, Rogers discloses in the background of invention, a flexible optical fiber ribbon (bundle) cable comprising at least two optical fibers having proximal and distal ends held together by an adhesive coating at said proximal and distal ends and having at least some portion of the fibers between said ends remaining uncoated.

Roger further describes coating the ends with metal so that they may be soldered together.

As to claim 8, the fibers are glass.

As to claim 9, the fibers emit infrared radiation (light).

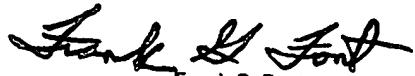

As to claims 10 and 13, the fiber bundle is arranged in many shapes, including rectangular, to align the respective ends.
